DETAILED ACTION

Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: The drawing lacks of all reference numbers. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Dunham (US 3114877)

Dunham discloses an ion mobility sensor for simultaneously detecting both ion and molecules, including:

a hollow housing (FIG. 1, element 1),

a glow discharge ionizer mounted to one end of said hollow housing (FIG.

1: the left part), and

a glow discharge detector mounted to an opposite end of said hollow

housing (FIG. 1, element 22).

Art Unit: 2853

Referring to claim 2: wherein said glow discharge ionizer includes a hollow tube and a pointed member coaxially mounted in said hollow tube (FIG. 1, element 15, 3).

2. Claims 14-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Davies et al. (US 5371364).

Referring to claim 14: Davies et al. disclose an ion mobility sensor (FIG. 1) having a mechanism for simultaneously detecting both ions and molecules passing therethrough (column 9, line 10-15: detecting ion species or related impurity molecules).

Referring to claim 15: wherein said mechanism includes a pair of spaced aligned glow discharge devices, one functioning as an ionizer (FIG. 1, elements 16, 18), and one functioning as a detector for ions and molecules (FIG. 1, element 20).

Allowable Subject Matter

2. Claims 3-13, 16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Referring to claim 3: The most pertinent art fails to disclose wherein said glow discharge detector includes a hollow tube and pointed member coaxially mounted in said hollow tube. Therefore, the claimed invention is not disclosed by the cited prior art.

Referring to claim 16: The most pertinent art fails to disclose wherein each of said glow discharge devices including a hollow tube and a pointed member coaxially mounted in said hollow tube. Therefore, the claimed invention is not disclosed by the cited prior art.

Claims 4-13 are allowable because they depend directly/indirectly on claim 3.

Response to Arguments

Art Unit: 2853

Applicant's arguments with respect to claims 1, 14 have been considered but are moot in view of the new ground(s) of rejection.
